JASMINE TRUONG

415.912.8232 | jas.truongg@gmail.com | Rancho Cordova, CA | linkedin.com/in/jas-truong | github.com/jtruong97

Full-stack software engineer with 2+ years building cloud-hosted applications, APIs, and data pipelines for an AI platform serving national security customers. Promoted to SWE II in 20 months; now own feature design end to end.

TECHNICAL SKILLS

Cloud & DevOps: AWS (EC2, S3), Docker, Supabase (Postgres, Auth, Edge Functions), Serverless, Cloudflare, CI/CD, Git
Backend & Data: Node.js, Express, REST APIs, GraphQL, PHP/CodeIgniter (MVC), PostgreSQL, MySQL, Data Modeling
Security: Secrets Management (HashiCorp Vault), OAuth 2.0, JWT, Row-Level Security (RLS), Access Control, SonarQube
Front-End & Languages: TypeScript, JavaScript (ES6+), React, React Native, HTML5, CSS3, Python, SQL, TanStack Query
Testing & Practices: Jest, Unit Testing, QA Test Plans, Code Review, ESLint, Agile/Scrum, System Design

WORK EXPERIENCE

Software Engineer II | *Rhombus Power Inc · Palo Alto, CA* May 2026 – Present

Full-stack engineer on Ambient, an AI-driven geospatial platform supporting national security operations.

- Lead features end to end as the sole frontend engineer, from a high-level executive request through planning, system design, and production; co-design API endpoints with data engineering and deliver a reviewable v1 in 2–3 days.
- Ship about one production feature a month, each with 3–5 sub-features spanning frontend and backend, across three concurrent codebases and two stacks (React/Node.js and PHP/CodeIgniter).
- Partnered with data engineering to cut map load time from 60s to under 1s on a high-volume time-series dataset, rewriting queries to use new date partitioning and language filtering.
- Implemented environment-driven feature configuration so one codebase ships per-client feature sets, gating functionality across customer deployments without forking.
- Maintain 85% Jest function coverage per file and remediate all critical and severe SonarQube findings before release.
- Manage dev environment keys and HashiCorp Vault database credentials; update secrets and tag release deployments.
- Designed feature foundations that other engineers now extend; mentor junior developers through code review.

Software Engineer I | *Rhombus Power Inc · Palo Alto, CA* Sep 2024 – May 2026

- Implemented full-stack components to spec in React and CodeIgniter; debugged in Docker, deployed to AWS (EC2, S3).
- Built geospatial visualizations with Mapbox GL, integrating raster imagery and GeoJSON data via REST APIs.

PROJECTS

FullyBookd fully-bookd.com

Solo-built tracker for unreleased books (~15k titles) with release calendars and private shelves (OAuth 2.0/JWT, RLS).

- Built scheduled serverless pipelines (Supabase Edge Functions) that discover new titles and backfill missing metadata, using bounded batches, queue rotation, and a rate-limit circuit breaker so runs resume where they stopped.
- Reconciled metadata across three external APIs with per-field fallback and anchor-year validation, rejecting bad values instead of last-write-wins; field-level locks protect manual corrections.
- Designed local-first search that queries the Postgres catalog through a fuzzy-match RPC before falling back to external APIs, with relevance ranking, debouncing, TTL caching, and stale-response guards.
- Automated catalog deduplication in PL/pgSQL via pg_cron with per-step logging; dry runs on production data caught three matching rules with 85–99% false positives before any destructive merge.

EDUCATION

Certificate, Full-Stack Software Engineering App Academy — 2024
B.S., Molecular, Cell, and Developmental Biology University of California, Santa Cruz — 2016

ADDITIONAL EXPERIENCE

Medical Assistant | *AC Wellness Medical Group · Cupertino, CA* Jan 2022 – Jan 2024

Clinical patient care and daily EHR systems use before moving into software engineering.
